LIGHTING AUDIT TEMPLATE

GREEN IMPACT STUDENTS' UNIONS

Why is a lighting audit important?

Lighting makes up 11% of the average energy consumption of UK households and can be incredibly energy intensive, so making sure that you've got the most energy efficient bulbs will help you to make substantial cost and carbon savings.

You can read more about lighting, carbon footprints and the best alternatives at this link.

Undertaking your lighting audit

Lighting audits are simple – manually check the type of lighting you have in each area, and noting where you will need to take action to get more efficient lighting. It will be useful to find out who you should contact to replace any inefficient lighting before you begin the audit.

Area	Type of lighting	Number of bulbs	Does it need updating?	Extra notes
[Room 1]	[type of bulb, auto-lighting or light switches]	[physically counted]	[yes/no/query]
